Acknowledgement

Knowledge is a continuous process. At this moment of my substantial enhancement, I would like to express my sincere gratitude to those who have supported and guided me throughout this project.

The completion of this interdisciplinary project would not have been possible without the coordination, cooperation, and combined efforts of various individuals who contributed their knowledge, creativity, skills, energy, and time.

I would like to express my sincere thanks to my project guide, **Dr. Jay Nanavati**, Principal **Dr. Dharmendra Patel**, and Dean **Dr. Sanskruti Patel** for their valuable guidance, encouragement, and moral support throughout the duration of this project. Without their continuous support, this work would not have been possible.

I am also thankful to all those who directly or indirectly contributed to this project. Even if some names are not mentioned here, their contributions are truly appreciated and will not be forgotten.

With Sincere Regards,

Kevinkumar Patel (24MSIT091)

Project Profile

1.PROJECT PROFILE

Project Name : Doctor Appointment Management System (CareSlot)

Type Of Application: Web Application

Project Duration: Fourth Semester

Technologies Used:

- **Frontend:** HTML5, CSS3, Tailwind CSS (v4.2.1), JavaScript (ES6+), React.js (v19.2.0), Redux (v5.0.1)
- **Backend:** Node.js (v22.22.2), Express.js (v5.2.1)
- **Database:** MongoDB (v6+)
- **Payment:** Razorpay (v2.9.6)
- **Analytics & Dashboard:** Chart.js (v4.5.1), Custom Dashboard

Project Description:

This project is a complete Full Stack Doctor Appointment Management System developed using the MERN Stack. The system allows patients to search for doctors, check available appointment slots, and book appointments online through a simple and user-friendly interface. Doctors can manage their schedules, handle patient appointments, and track their earnings using a dedicated dashboard.

The system also includes an **Admin panel** that provides full control over doctors, patients, and appointments across the platform. A **modern analytics dashboard** is implemented to visualize important system data such as appointment statistics, doctor performance, and earnings using graphical charts.

Additionally, the platform supports **Excel report download functionality and PDF generate functionality**, allowing administrators and doctors to export appointment and earnings data for reporting and record-keeping purposes. The system also integrates secure authentication, role-based access control, and **online payment processing using Razorpay**, making the platform efficient, secure, and suitable for modern healthcare appointment management.

Additionally, the system incorporates **AI-powered assistance** to enhance user experience across all roles. Patients can receive intelligent **doctor recommendations** and instant query support, while doctors can benefit from **automated** insights and scheduling suggestions. Administrators can utilize **AI-driven analytics** to identify trends and optimize system performance. This integration of artificial intelligence improves efficiency, decision-making, and overall usability of the platform.

Key Features:

- I. **User Registration and Secure Login** using JWT-based authentication
- II. **Role-Based Access Control** for Patient, Doctor, and Admin modules
- III. **Doctor Listing with Search and Specialization Filtering**
- IV. **Appointment Booking and Management System** with status tracking (Pending, Confirmed, Completed, Cancelled)
- V. **Doctor Dashboard** for managing availability slots, appointments, and tracking earnings
- VI. **Admin Panel** for managing doctors, patients, and appointments across the platform
- VII. **Online Payment Integration** using Razorpay for secure transactions
- VIII. **Modern Analytics Dashboard** with graphical reports for insights and performance tracking
- IX. **Excel Report Download Functionality** for administrators and doctors
- X. **PDF Report Generation** for appointments and earnings records
- XI. **Email Notification System** for appointment booking and doctor credential delivery
- XII. **AI-Powered Assistance** for smart recommendations, insights, and user support
- XIII. **Caching Mechanism using Redis** to improve performance and reduce API response time
- XIV. **Containerized Deployment using Docker** for environment consistency and scalability
- XV. **NGINX Integration** for reverse proxy and load balancing
- XVI. **Responsive UI Design** for seamless usage across devices

INTRODUCTION TO TOOLS

2. INTRODUCTION TO TOOLS

The **Doctor Appointment Management System (CareSlot)** is developed using modern web development tools and technologies that support efficient application development, scalability, and high performance. These tools are utilized for designing the user interface, implementing server-side logic, managing the database, and integrating additional services such as payments, analytics, caching, artificial intelligence, and email notifications..

Frontend Tools

- **HTML-(HTML5)**
HTML is used to create the basic structure of web pages. It defines elements such as forms, buttons, headings, and layouts that form the foundation of the user interface.
- **Tailwind-CSS-(v4.2.1)**
Tailwind CSS is a utility-first CSS framework used to design modern and responsive user interfaces. It provides pre-defined classes that help developers quickly build clean and consistent UI components.
- **JavaScript-(ES6+)**
JavaScript is used to add interactivity and dynamic behavior to web pages. It enables features such as form validation, API communication, and real-time updates in the application.
- **React.js-(v19.2.0)**
React.js is a JavaScript library used for building fast and interactive user interfaces. It allows developers to create reusable components and efficiently develop single-page applications (SPA).
- **Redux-(v5.0.1)**
Redux is a state management library used with React to manage application data across multiple components. It ensures a predictable and centralized data flow.
- **Chart.js-(v4.5.1)**
Chart.js is a JavaScript library used to create graphical charts and data visualizations. It is used in dashboards to display analytics such as appointment statistics and earnings.

Backend Tools

- **Node.js-(v22.22.2)**
Node.js is a server-side runtime environment that allows JavaScript to run on the backend. It is used to build scalable and high-performance server applications.
- **Express.js-(v5.2.1)**
Express.js is a lightweight web framework for Node.js used to build REST APIs. It simplifies routing, request handling, and middleware integration in backend development.
- **CORS-(v2.8.6)**
CORS is a middleware that allows secure communication between the frontend and backend servers. It enables controlled access to resources from different domains.
- **Cookie-Parser-(v1.4.7)**
Cookie-parser is a middleware used to read and manage cookies in HTTP requests. It helps handle authentication tokens and user session data stored in cookies.
- **Cloudinary-(v2.9.0)**
Cloudinary is a cloud-based service used for storing and managing images. It is used in the system to upload and store user profile images securely.

Database

- **MongoDB-(v6+)**
MongoDB is a NoSQL database that stores data in flexible JSON-like documents. It allows scalable and efficient storage of application data.
- **Mongoose-(v9.2.1)**
Mongoose is an Object Data Modeling (ODM) library used to interact with MongoDB. It provides schema-based structure and data validation for database collections.

Authentication & Security

- **Express-Rate-Limit-(v8.2.1)**
Express-rate-limit is a middleware used to limit repeated API requests from users. It helps protect the system from spam requests and brute-force attacks.
- **JSON-Web-Token-(v9.0.3)**
JWT is used for secure user authentication. It allows the server to verify users through tokens without storing session data on the server.

Payment Integration

- **Razorpay-(v2.9.6)**

Razorpay is an online payment gateway integrated into the system to allow patients to pay consultation fees securely through digital transactions.

Email Notification

- **Nodemailer-(v8.0.4)**

Nodemailer is used to send automated emails from the server. It sends notifications such as appointment confirmations and doctor account credentials when created by the admin.

Excel File Export

- **ExcelJS-(v4.4.0)**

ExcelJS is a library used to generate and download Excel files from the application. It allows admins and doctors to export appointment and earnings data for reporting and analysis.

AI Integration

- **Groq-API-(Meta-LLaMA-Model)-(Groq-SDK-v1.1.1)**

The system integrates AI capabilities using the Groq API with the Meta LLaMA model. This enables intelligent features such as automated user assistance, smart recommendations, and real-time query handling for patients, doctors, and administrators.

Caching & Performance

- **Redis-(v5.11.0)**

Redis is an in-memory data store used for caching frequently accessed data such as doctor listings and available slots. It improves application performance and reduces database load.

Containerization & Deployment

- **Docker-(v29.3.1)**

Docker is used to containerize the application, including frontend, backend, database, and Redis services. It ensures consistency across development and production environments and simplifies deployment.

SYSTEM STUDY

3. SYSTEM STUDY

3.1 Existing System

In many healthcare facilities, appointment scheduling is still handled manually through phone calls, physical visits, or basic record-keeping systems. Patients usually need to visit the clinic or call the hospital to check doctor availability and book appointments. This process often leads to several issues such as long waiting times, scheduling conflicts, and lack of proper record management.

The manual system also makes it difficult for doctors to manage their schedules efficiently and for administrators to monitor appointments and patient records. In addition, there is no centralized platform to track appointment status, doctor availability, or payment information. These limitations reduce overall efficiency and may cause inconvenience for both patients and healthcare providers.

3.2 Proposed System:

The proposed system, **Doctor Appointment Management System (CareSlot)**, is a web-based platform designed to automate and simplify the appointment management process. The system allows patients to search for doctors, check available time slots, and book appointments online.

Doctors can manage their schedules, view appointments, and track their earnings through a personalized dashboard. Administrators have full control over the system, including managing doctors, patients, and appointments. The platform also provides analytics dashboards, secure authentication, online payment integration, email notifications, and Excel report downloads.

This digital solution improves efficiency, reduces manual work, and provides better communication between patients and doctors.

3.3 Scope Of the Proposed System:

The scope of the proposed system includes developing a web-based platform that supports appointment booking and management for healthcare services. The system will allow patients to book appointments with doctors based on available time slots and manage their appointment history.

Doctors will be able to manage their availability, view patient details, and monitor their appointments and earnings. Administrators will manage system users,

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

monitor appointments, and analyze system performance through dashboards and reports.

The system can also be expanded in the future with additional features such as mobile applications, video consultation, and automated appointment reminders.

3.4 Aims and Objectives:

The main aim of the Doctor Appointment Management System is to develop a digital platform that simplifies the process of scheduling and managing doctor appointments.

Objectives of the system include:

- To provide an easy and efficient online appointment booking system for patients.
- To allow doctors to manage their schedules and appointments effectively.
- To enable administrators to manage doctors, patients, and appointments from a centralized platform.
- To reduce manual errors and improve scheduling efficiency.
- To provide data visualization and analytics through modern dashboards.
- To integrate secure online payment and email notification systems.
- To allow data export through Excel reports for better record management.

3.5 Feasibility Study

A feasibility study evaluates whether the proposed system is practical and beneficial for implementation. It analyzes different aspects such as operational feasibility, technical feasibility, and economic feasibility to determine whether the system can be successfully developed and deployed.

3.5.1 Operational Feasibility

Operational feasibility refers to how well the proposed system will work within the organization and whether users will be able to operate it effectively. The Doctor Appointment Management System is designed with a simple and user-friendly interface so that patients, doctors, and administrators can easily use the platform.

The system reduces manual workload, improves appointment management, and enhances communication between patients and doctors. Therefore, it is highly practical and beneficial for healthcare service management.

3.5.2 Technical Feasibility

Technical feasibility evaluates whether the required technology and resources are available to develop and maintain the system. The CareSlot system uses widely adopted technologies such as **React.js**, **Node.js**, **Express.js**, and **MongoDB**, which are reliable and suitable for building scalable web applications.

These technologies support fast development, efficient data handling, and secure authentication. Since these tools are well-supported and commonly used in modern web development, the system is technically feasible.

3.5.3 Economic Feasibility

Economic feasibility analyzes the cost involved in developing and maintaining the system compared to the benefits it provides. The proposed system is developed using open-source technologies such as React, Node.js, and MongoDB, which significantly reduce development costs.

The system helps reduce manual work, improves efficiency, and provides better management of appointments and records. Therefore, the benefits of the system outweigh the development and maintenance costs, making it economically feasible.

SYSTEM ANALYSIS

4. SYSTEM ANALYSIS

System analysis is the process of studying the system requirements and identifying how the system should function to meet user needs. It helps in understanding the functionalities, system behavior, and interactions between different components.

In the **Doctor Appointment Management System (CareSlot)**, the analysis focuses on defining the requirements for patients, doctors, and administrators so that the platform can efficiently manage appointment scheduling, user management, and system monitoring.

4.1 Requirements Specification (With System Modules)

The system is designed with multiple modules that define the functionality available for different types of users. Each module performs specific tasks that contribute to the overall working of the application.

1. Patient Module

The Patient Module allows users to search for doctors, book appointments, and manage their appointment history.

Main Functions:

- User registration and secure login
- View and search doctors by specialization
- View doctor profile and available time slots
- Book appointment with selected doctor
- Online payment using Razorpay
- Receive email confirmation after booking
- View appointment history and status (Pending, Confirmed, Completed, Cancelled)
- Manage personal profile information

2. Doctor Module

The Doctor Module allows doctors to manage their schedules, appointments, and patient information.

Main Functions:

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Secure login for doctors
- View dashboard with appointment statistics and earnings
- Manage available appointment slots (add / delete)
- View upcoming appointments
- Confirm, cancel, or mark appointments as completed
- View patient details for appointments
- Download Excel report for appointment data
- Update doctor profile information

3. Admin Module

The Admin Module provides full control over the system and manages all users and system data.

Main Functions:

- Secure admin authentication
- Add new doctors to the system
- Automatically send doctor login credentials via email
- View and manage all doctors
- Activate or deactivate doctor accounts
- View and manage patient records
- Monitor all appointments in the system
- View commission details from appointments
- Download Excel reports for system data
- View analytics dashboard with graphical reports

4. Appointment Management Module

This module manages the entire appointment scheduling process.

Main Functions:

- Create appointments based on available slots
- Track appointment status (Pending, Confirmed, Completed, Cancelled)
- Manage doctor availability and time slots
- Store appointment details including doctor, patient, date, and time
- Provide centralized management of appointment records

5. Notification and Communication Module

This module handles communication between the system and users.

Main Functions:

- Send email notifications for appointment booking
- Send doctor account credentials when admin creates a doctor profile

6. Analytics and Reporting Module

This module provides system insights and data visualization.

Main Functions:

- Display graphical analytics using charts
- Show appointment statistics and doctor earnings
- Display top-performing doctors
- Export reports in Excel format for record management

7. AI Assistance Module

This module integrates artificial intelligence to enhance system intelligence and user experience.

Main Functions:

- Provide AI-based chatbot support for patients, doctors, and administrators
- Suggest doctors based on user symptoms, preferences, or past bookings
- Assist users with instant query resolution using natural language processing
- Generate intelligent insights and recommendations for doctors and admins
- Improve decision-making using AI-driven analytics

System Design

5.1 Data Dictionary

Database Name: CareSlot

- Collection Name: User

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	name	String	Required, Trim	Full name of the user (whitespace trimmed)
3	email	String	Required, Unique, Lowercase, Indexed, Trim	Email used for authentication and communication
4	password	String	Required, Min Length: 6, Select: false	Hashed password (excluded from queries by default)
5	phone	String	Optional	Contact number of the user
6	image	String	Default Value	URL of the user profile image (default provided if not uploaded)
7	role	String	Required, Enum (admin, doctor, patient)	Defines user role and access control
8	isActive	Boolean	Default: true	Indicates whether the account is active
9	isDeleted	Boolean	Default: false	Soft delete flag (record not physically removed)
10	createdAt	Date	Auto-generated (timestamps)	Timestamp when the user was created
11	updatedAt	Date	Auto-generated (timestamps)	Timestamp when the user was last updated

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Collection Name: Patient

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	userId	ObjectId	Required, Unique, Reference (User), Indexed	References the associated user account
3	dateOfBirth	Date	Optional	Date of birth of the patient
4	gender	String	Enum (male, female, other)	Gender of the patient
5	geolocation.type	String	Enum ("Point"), Default: "Point"	GeoJSON type for location
6	geolocation.coordinates	Array (Number)	Required	Stores longitude and latitude as [lng, lat]
7	geolocation.address	String	Optional, Max Length: 500	Human-readable address of the patient
8	medicalHistory	String	Optional, Max Length: 2000	Patient's medical history or health notes
9	isDeleted	Boolean	Default: false	Soft delete flag
10	createdAt	Date	Auto-generated (timestamps)	Record creation timestamp
11	updatedAt	Date	Auto-generated (timestamps)	Last update timestamp

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Collection Name: Doctor

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	userId	ObjectId	Required, Unique, Reference (User), Indexed	References the associated user account
3	specialization	String	Required, Indexed	Medical specialization (e.g., Cardiologist, Dentist)
4	experience	Number	Default: 0, Min: 0	Total years of professional experience
5	about	String	Optional, Max Length: 1000	Description/profile of the doctor
6	consultationFee	Number	Required, Min: 0	Fee charged per appointment
7	availableSlots	Array (Object)	Required (Nested Structure)	Stores available appointment slots
8	availableSlots.date	Date	Required	Date of availability
9	availableSlots.times	Array (String)	Required	List of available time slots
10	geolocation.type	String	Enum ("Point"), Default: "Point"	GeoJSON type for location

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

11	geolocation.coordinates	Array (Number)	Required	Stores [longitude, latitude]
12	geolocation.address	String	Optional, Max Length: 500	Doctor's clinic/hospital address
13	isApproved	Boolean	Default: false	Whether doctor is approved by admin
14	averageRating	Number	Default: 0	Average rating from patients
15	totalReviews	Number	Default: 0	Total number of reviews
16	aCommission	Number	Default: 10	Platform commission percentage (%)
17	commissionHistory	Array (Object)	Optional	Tracks commission changes over time
18	commissionHistory.commission	Number	Required	Commission percentage at that time
19	commissionHistory.changedAt	Date	Default: Date.now	Timestamp of commission change
20	isDeleted	Boolean	Default: false	Soft delete flag
21	createdAt	Date	Auto- generated (timestamps)	Record creation timestamp
22	updatedAt	Date	Auto- generated (timestamps)	Last update timestamp

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Collection Name: Appointment

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	doctorId	ObjectId	Required, Reference (Doctor), Indexed	References the doctor for the appointment
3	patientId	ObjectId	Required, Reference (Patient), Indexed	References the patient who booked the appointment
4	appointmentDate	Date	Required	Date of the scheduled appointment
5	timeSlot	String	Required	Selected time slot for the appointment
6	status	String	Enum (pending, confirmed, completed, cancelled), Default: pending, Indexed	Current status of the appointment
7	prescriptionAdded	Boolean	Default: false	Indicates whether a prescription has been added
8	paymentStatus	String	Enum (pending, paid, failed), Default: pending	Payment completion status
9	paymentMethod	String	Enum (cash, razorpay), Optional	Method used for payment
10	consultationFee	Number	Required	Fee charged for the appointment
11	adminCommission	Number	Default: 0	Commission earned by the admin

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

12	notes	String	Optional, Max Length: 1000	Additional notes for the appointment
13	isDeleted	Boolean	Default: false	Soft delete flag
14	createdAt	Date	Auto-generated (timestamps)	Record creation timestamp
15	updatedAt	Date	Auto-generated (timestamps)	Last update timestamp

- Collection Name: Review

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	doctorId	ObjectId	Required, Reference (Doctor), Indexed	References the doctor receiving the review
3	patientId	ObjectId	Required, Reference (Patient), Indexed	References the patient who submitted the review
4	rating	Number	Required, Min: 1, Max: 5	Rating score given by the patient
5	comment	String	Optional, Max Length: 1000	Feedback or comments
6	isApprove	Boolean	Default: false	Indicates whether the review is approved by admin
7	aiReason	String	Default: ""	AI-generated moderation reason or flag
8	isDeleted	Boolean	Default: false	Soft delete flag
9	createdAt	Date	Auto-generated (timestamps)	Timestamp when the review is created
10	updatedAt	Date	Auto-generated (timestamps)	Timestamp when the review is last updated

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Collection Name: Payment

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	appointmentId	ObjectId	Required, Unique, Reference (Appointment), Indexed	Links payment to a specific appointment
3	doctorId	ObjectId	Required, Reference (Doctor)	Doctor associated with the payment
4	patientId	ObjectId	Required, Reference (Patient)	Patient who made the payment
5	amount	Number	Required	Total payment amount
6	paymentMethod	String	Required, Enum (cash, razorpay)	Method used for payment
7	razorpayOrderId	String	Optional	Razorpay order identifier
8	razorpayPaymentId	String	Optional	Razorpay payment identifier
9	status	String	Enum (created, success, failed), Default: created	Current payment status
10	createdAt	Date	Auto-generated (timestamps)	Timestamp when payment record is created
11	updatedAt	Date	Auto-generated (timestamps)	Timestamp when payment is updated

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Collection Name: Prescription

No.	Field Name	Data Type	Constraint	Description
1	_id	ObjectId	Primary Key, Auto-generated	Unique identifier automatically generated by MongoDB
2	appointmentId	ObjectId	Required, Unique, Reference (Appointment), Indexed	Links prescription to a specific appointment
3	doctorId	ObjectId	Required, Reference (Doctor), Indexed	Doctor who issued the prescription
4	patientId	ObjectId	Required, Reference (Patient), Indexed	Patient receiving the prescription
5	medicines	Array (Object)	Required (Nested Structure)	List of prescribed medicines
6	medicines.medicineName	String	Required, Trim	Name of the medicine
7	medicines.dosage	String	Required	Dosage instructions (e.g., 1 tablet)
8	medicines.timing	Array (String)	Enum (morning, afternoon, night)	When to take the medicine
9	medicines.mealTime	String	Enum (before_meal, after_meal)	Whether taken before or after meals
10	medicines.duration	String	Optional	Duration for taking medicine
11	additionalNotes	String	Optional, Max Length: 1000	Extra instructions from doctor
12	isDeleted	Boolean	Default: false	Soft delete flag

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

13	createdAt	Date	Auto-generated (timestamps)	Timestamp when prescription is created
14	updatedAt	Date	Auto-generated (timestamps)	Timestamp when prescription is updated

Screen Layouts / UI Design

5.2.1 Login & Register Page

The image shows a mobile app interface for the 'CareSlot' system. At the top, there is a blue heart icon with a white pulse line, followed by the text 'CareSlot' and 'Create your health profile'. Below this, the word 'Register' is centered. The form consists of four input fields: a name field with the placeholder 'patient', an email field with 'patient123@gmail.com', a phone number field with '7889788978', and a password field with a lock icon and dots. A blue button with a white heart icon and the text 'Create Account' is positioned below the fields. At the bottom, there is a link that says 'Already have an account? Sign In'.

The image shows a mobile app interface for the 'CareSlot' system. At the top, there is a blue heart icon with a white pulse line, followed by the text 'CareSlot' and 'Welcome back, Specialist'. Below this, the word 'Sign In' is centered. The form consists of two input fields: an email field with 'admin@gmail.com' and a password field with a lock icon and dots. A blue button with a white heart icon and the text 'Sign In' is positioned below the fields. At the bottom, there is a link that says 'Don't have an account? Register Now'.

5.2.2 Admin Layout

- Analytics Dashboard

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Add New Doctors

The screenshot shows the 'Add Doctor' page in the CareSlot system. The left sidebar contains the user profile 'KEVINKUMAR PATEL Admin' and navigation links: Dashboard, Add Doctor (highlighted), All Doctors, All Patients, Appointments, Reviews, and Logout. The main content area is titled 'Onboard New Doctor' and includes the subtitle 'Add a new verified healthcare professional to the CareSlot network.' The form is divided into two sections: 'Basic Information' and 'Professional Details'. The 'Basic Information' section contains fields for Full Name (niraj), Email Address (niraj@gmail.com), Phone Number (1231231230), and Specialization (Orthopedic). The 'Professional Details' section contains fields for Years of Exp. (6), Consultation Fee (₹ 850), and Platform Comm. % (15%). Below these fields is a text area for 'About Doctor' with the text: 'Orthopaedics is a medical specialty focused on the musculoskeletal system - the system that helps your body move and stay supported.'

The screenshot shows the 'Add Doctor' page in the CareSlot system, continuing from the previous section. The 'Professional Details' section is visible, showing the same fields as before: Years of Exp. (6), Consultation Fee (₹ 850), and Platform Comm. % (15%). Below this is the 'About Doctor' text area with the same text. The 'Weekly Availability' section is now visible, featuring a calendar icon, a date field (24-04-2026), and a time field (09:10 AM, 10:10 AM, 01:10 PM). There is a '+ Add Day' button and a trash icon. At the bottom of the form is a large blue button labeled 'Register Doctor'.

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- Show Reviews

The screenshot shows the 'Reviews' page for Doctor Patel. The left sidebar contains navigation links: Dashboard, All Appointments, Patients, Slots, Reviews (highlighted), and Logout. The main content area is titled 'Patient Feedback' with the subtitle 'Monitor your clinical reputation and patient satisfaction.' It features a '3.5' Clinic Score (Average Patient Rating) with 5 stars, and a '4' Verified Reviews badge. Below this, there are three review cards from 'Anonymous Patient' with star ratings and dates (March 25, 2026). The first review says 'redis', the second 'good review by redis', and the third is empty. Each review card has a 'UN' icon and a 'VERIFIED CONSULTATION' label.

- Manage Profile

The screenshot shows the 'Profile' page for Doctor Patel. The left sidebar contains navigation links: Dashboard, All Appointments, Patients, Slots, Reviews, and Logout. The main content area is titled 'Professional Profile' with the subtitle 'Manage your clinical identity and visibility status.' It features a profile card for Doctor Patel with a photo, a camera icon, and status labels 'ONLINE & ACTIVE' and 'ORTHOPEDIC'. Below the profile card, there are three boxes: 'EXPERIENCE' (6 Years Clinical practice), 'CONSULTATION FEE' (₹650 Per Session), and 'PLATFORM SHARE' (15% Admin Commission). At the bottom, there are two sections: 'Clinic Settings' and 'Security'. The 'Clinic Settings' section includes fields for 'PRACTICE VISIBILITY' (Active), 'FULL DOCTOR NAME' (Patel), 'PHONE NUMBER', and 'SPECIALIZATION'. The 'Security' section includes fields for 'CURRENT PASSWORD' and 'NEW ACCESS KEY'.

Doctor Appointment Management System

Doctor Information

Dr. PatelSpecialization: Orthopedic
Email: 24msit091@charusat.edu.inExperience: 6 Years

Patient Information

Name: kevinEmail: kevinpatel22052004@gmail.com
Age: 22Appointment: Tue May 26 2026
Time: 09:10 AM

Medicine	Dosage	Timing	Meal	Duration
Paracetamol	1 Tablet	morning, night	after_meal	7 DAYS

Additional Notes
Tack A Dosage On Time And do not Skip .

Doctor Signature

5.3 Reports :

Reports play an important role in the **Doctor Appointment Management System (CareSlot)** by providing organized and structured information about appointments, doctors, patients, and earnings. The system generates reports that help administrators and doctors monitor activities, analyze performance, and maintain proper records.

The platform includes a **modern analytics dashboard and Excel report download functionality**, allowing users to view data in both graphical and tabular formats.

5.3.1 Appointment Reports

The system provides detailed reports of all appointments booked through the platform. These reports help administrators and doctors track appointment activities and monitor the status of each booking.

Information included in appointment reports:

- Patient Name
- Doctor Name
- Appointment Date
- Time Slot
- Appointment Status (Pending, Confirmed, Completed, Cancelled)
- Payment Method (Cash / Razorpay)
- Payment Status

These reports help monitor appointment trends and ensure smooth scheduling.

5.3.2 Doctor Performance Reports

Doctor performance reports provide insights into the activity and performance of doctors on the platform.

Information included in doctor reports:

- Total number of appointments handled
- Total earnings generated
- Average rating given by patients
- Number of completed appointments
- Patient feedback and reviews

These reports help administrators evaluate doctor performance and service quality.

5.3.3 Patient Activity Reports

Patient activity reports provide information about patient interactions within the system.

Information included in patient reports:

- Total appointments booked by the patient
- Appointment history
- Appointment status details
- Payment details

These reports help administrators understand patient engagement with the platform.

5.3.4 Financial and Commission Reports

The system also provides financial reports that help track payments and earnings.

Information included in financial reports:

- Total payments received
- Payment method distribution (Cash / Razorpay)
- Doctor consultation fees
- Admin commission from appointments

These reports help administrators monitor financial transactions and revenue generated through the platform.

5.3.5 Excel Report Download

The system includes an **Excel report export feature** that allows administrators and doctors to download important data for external use and record keeping.

Using the **ExcelJS library**, users can download structured reports containing:

- Appointment details
- Doctor earnings
- Payment information
- Patient records

This feature makes it easier to analyze data, generate summaries, and maintain system records outside the application.

System Testing

6.1 Testing Strategy :

Unit Testing

- Tests individual functions, APIs, and services separately
- Ensures each module works correctly in isolation
- Example: User registration, login API validation

Integration Testing

- Verifies interaction between multiple modules
- Ensures proper data flow between backend, database, and APIs
- Example: Booking appointment + payment flow

System Testing

- Tests the complete application end-to-end
- Validates all modules (Patient, Doctor, Admin) together
- Example: Full appointment lifecycle (book → pay → confirm → complete)

User Acceptance Testing (UAT)

- Confirms system meets user requirements
- Performed from real user perspective
- Example: Patient booking and doctor dashboard usability

Performance Testing

- Checks system speed and response under load
- Ensures scalability and stability
- Example: Multiple users booking appointments simultaneously

Security Testing

- Ensures data protection and secure authentication
- Identifies vulnerabilities in APIs and access control
- Example: JWT authentication, password encryption

6.2. Test Cases :-

- Authentication**

No.	Test Case	Input	Expected Output	Result
1	User Registration	Valid data	User registered successfully	Pass
2	Duplicate Email	Existing email	Error: Email already exists	Pass
3	User Login	Valid credentials	Login successful (JWT token)	Pass
4	Invalid Login	Wrong password	Error message displayed	Pass
5	Empty Fields	No input	Validation error	Pass
6	Logout	Valid session	User logged out successfully	Pass

- Doctor Module**

No.	Test Case	Input	Expected Output	Result
1	Doctor Dashboard	Login	Dashboard data displayed	Pass
2	Add Slots	Valid date/time	Slot added successfully	Pass
3	Delete Slot	Select slot	Slot removed	Pass
4	View Patients	Open list	Patient list displayed	Pass
5	Update Profile	Valid data	Profile updated	Pass
6	View Earnings	Open dashboard	Earnings displayed correctly	Pass

- Patient Module**

No.	Test Case	Input	Expected Output	Result
1	View Doctors	Open page	Doctor list displayed	Pass
2	Search Doctor	Specialization	Filtered results shown	Pass
3	View Doctor Details	Select doctor	Details displayed	Pass
5	Update Profile	New data	Profile updated	Pass
6	View Appointments	Open Appointment	Appointment list displayed	Pass

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

• Appointment Module

No.	Test Case	Input	Expected Output	Result
1	Book Appointment	Valid input	Appointment created (Pending)	Pass
2	Double Booking	Same slot	Error: Slot unavailable	Pass
3	Cancel Appointment	Cancel action	Status = Cancelled	Pass
4	Confirm Appointment	Doctor action	Status = Confirmed	Pass
5	Complete Appointment	Doctor action	Status = Completed	Pass
6	Invalid Booking	Missing data	Validation error	Pass

• Payment Module

No.	Test Case	Input	Expected Output	Result
1	Payment Success	Valid Razorpay	Status updated to Paid	Pass
2	Payment Failure	Failed payment	Status = Failed	Pass
3	Payment Pending	Not completed	Status = Pending	Pass
4	Invalid Payment	Wrong data	Error message	Pass
5	Payment Verification	Valid signature	Payment verified	Pass

• Admin Module

No.	Test Case	Input	Expected Output	Result
1	Admin Dashboard	Login	System stats displayed	Pass
2	Add Doctor	Valid data	Doctor created	Pass
3	Deactivate Doctor	Toggle status	Doctor disabled	Pass
4	View Patients	Show Patient	Patient data displayed	Pass
5	Delete Patient	Delete action	Soft delete applied	Pass
6	View Reports	Request data	Reports generated	Pass

DOCTOR APPOINTMENT MANAGEMENT SYSTEM (CareSlot)

- **Notification & Reporting Module**

No.	Test Case	Input	Expected Output	Result
1	Email Notification	Booking	Email sent	Pass
2	Doctor Credentials Mail	Add doctor	Email sent	Pass
3	Excel Report Download	Request file	File downloaded	Pass
4	PDF Report	Generate	PDF created	Pass
5	Invalid Email	Wrong email	Error handled	Pass

Future Enhancement

8. Future Enhancement

- **SMS Reminder:** The system can send automatic SMS reminders to patients and doctors before scheduled appointments to reduce missed visits and improve time management.
- **Video Consultation Integration:** Future versions can include a video consultation feature that allows doctors and patients to connect online for remote medical consultations.
- **Multi-Language Support:** The platform can support multiple languages to make the system accessible to users from different regions.
- **Mobile App Version:** A dedicated mobile application for Android and iOS can be developed to provide easier access and better user experience.
